Office Action Summary

Art Unit: 1742

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

 The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 2. Claims 26-58 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.
- 3. The expression "two or more metals" in instant claims 26 and 42 is not supported by the specification originally filed.

Claim Rejections - 35 USC § 103

- 4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each

Art Unit: 1742

claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

- 6. Claims 26-30, 33-36, 38-48, and 50-58 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over USP 5527628 to Anderson et al (col. 4, lines 15-27, col. 3, lines 18-32, and col. 5, lines 59 to col. 6, line 59).
- 7. The Anderson et al reference(s) disclose(s) the features including steps of combining a solder with the components of the intermetallic phases such as Cu and Ag to form a mixture (col. 5, line 59 to col. 6, line 12). The mixture can be formed as composite solder wire, solder sheet, solder ingot, and solder powder (col. 5, lines 60-62). The composite solder melt can be chill cast (col. 5, lines 67 to col. 6, line 2) to form an ingot which could be used form solder powder by melt atomization (col. 6, lines 14-15). Anderson et al do not disclose the claimed cooling rate. But, Anderson et al disclose the solder powder is produced by conventional atomization techniques (col. 6, lines 14-50) which is known in the art of cited reference that the cooling rate is at least 100 °C/sec. The examiner takes the official notice that conventional atomization methods would have the cooling rate at least 100 °C/sec. Thus, the claimed invention is taught by the Anderson et al reference.
- 8. Claims 37 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable

Art Unit: 1742

over USP 5527628 to Anderson et al as applied to claims above, and further in view of Gibson et al.

- 9. The claimed subject matter as is disclosed and rejected above by the cited reference(s) except for the volume of the intermetallic phase. However, Gibson et al in abstract teach 20 volume percent intermetallic phase would improve fatigue resistance. Therefore, it would have been obvious to one having ordinary skill in the art of the cited references at the time the invention was made to employ the teachings as taught by Gibson et al in order to improve the solder fatigue resistance. In re Venner, 120 USPQ 193 (CCPA 1958), In re LaVerne, et al., 108 USPQ 335, and In re Aller, et al., 105 USPQ 233.
- 10. Claims 31-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 5527628 to Anderson et al as applied to claims above, and further in view of USP 5520752 to Lucey, Jr. et al.
- 11. The claimed subject matter as is disclosed and rejected above by the cited reference(s) except for the different intermetallic phases and cooling methods.

 However, Lucey, Jr. et al in col. 3, line 64 to col. 4, line 5 teaches the other claimed intermetallic phases in the eutectic solder alloys and their cooling methods are conventional methods to produce conventional solders. It has been held that combining known ingredient having known functions, to provide a composition

Art Unit: 1742

having the additive effect of each of the known functions is within realm of performance of ordinary skill artisan. In re Castner, 186 USPQ 213 (217). The use of conventional materials to perform their known functions in a conventional process is obvious. In re Raner, 134 USPQ 343 (CCPA 1962).

Response to Arguments

- 12. Applicant's arguments filed March 27, 2002 have been fully considered but they are not persuasive.
- 13. Applicants argue that Anderson fails to mix an already formed intermetallic compound with a solder. But, applicants' argument is not found consistent with instant claims. The instant claim 26, step a), for example, requires "components of the intermetallic compound", not "an already formed intermetallic compound". Furthermore, applicants' said argument does not support by the specification as originally filed. Throughout the instant specification, only the components of the intermetallic compound are added (page 6, lines 5-11 of the instant specification, for example), not an already formed intermetallic compound. The instant intermetallic phase is precipitated/formed by heat treatment (page 6, lines 14-19 of the instant specification).
 - 14. Applicants' argument as set forth in page 9, first full paragraph of the instant

Art Unit: 1742

remarks is noted. Applicants' attention is directed to col. 5, line 59 to col. 6 line 2 which teaches to form the solder ingot. Anderson in col. 6, lines 14-19 teaches to use said solder ingot as stock material to form solder powder by atomization. The process taught by Anderson as set forth includes melted the solder components, cooled to form ingot, remelted the ingot, and rapidly cooled as atomized the molten solder to solder powder.

Conclusion

15. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Applicant is reminded that when amendment and/or revision is required, applicant should therefore specifically point out the support for any amendments made to the disclosure. See MPEP § 2163.06 (a) and 37 C.F.R. § 1.119.

Examiner Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Ip whose telephone number is (703) 308-2542. The examiner can normally be reached on Monday to Friday from 5:30 A.M. to 2:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Roy V. King, can be reached on (703)-308-1146.

Art Unit: 1742

The facsimile phone number for this Art Unit 1742 are (703) 305-3601 (Official Paper only) and (703) 305-7719 (Unofficial Paper only). When filing a FAX in Technology Center 1700, please indicate in the Header (upper right) "Official" for papers that are to be entered into the file, and "Unofficial" for draft documents and other communication with the PTO that are not for entry into the file of the application. This will expedite processing of your papers.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0651.
